

Education

Bachelor of Landscape Architecture, The Ohio State University, 2004

Professional Registration

Landscape Architect: Ohio

Professional Associations

American Society of Landscape Architects (ASLA)

Professional Experience

- Environmental Design Group
 - Bird Houk Colaborative
 - MKSK

Awards & Recognition

Winner, Ohio Chapter ASLA, Belmont Block Competition

Winner, Ohio Chapter ASLA, Antiqua Resort Competition

Lekki Town Center
Winner, 2014 First World Communities Design Competition

Overview and Experience:

Dave has combined his passion for design with a creative, yet practical problem solving approach to create spaces that are timeless, functional, and meaningful for the intended users. Dave is involved in projects from concept design through construction. His sense of scale has afforded him the opportunity to work on projects ranging from small scale gardens to large scale urban design projects and green spaces. A combination of creativity and graphic communication skills, construction knowledge, and ability to relate to clients insures quality implementation and innovative design.

SELECTED PROJECTS:

Ohio State University Rooftop, Edwards Communities

G2 is developing conceptual landscape plans and construction drawings for two rooftop courtyards that are the focus of this 170 unit, 445 bed mixed use development project. The six-story building across from the Wexner Center for the Arts will take up the entire block between 16th and 17th avenues, replacing a string of older buildings as redevelopment continues along the OSU campus. The courtyards are located adjacent to the community rooms and exercise facilities, and are directly above the parking lot.

Lekki Town Center, Lagos, Nigeria

Starting at the Lekki Epe Expressway, the architecture is sited to funnel views through the large open green and into the central corridor where the user will encounter a retail and recreational experience unlike any other. The mixed use buildings located on this central spine will be integrated with an active and walkable outdoor environment. Views along the streetscape are channeled by the architecture and terminate on a signature building. *(Award Winner - First World Communities Design Competition, 2014)*

River Gate Student Apartments, Ohio University

A short walk to the OU campus and Court Street, River Gate is both a convenient and smart choice for student living in Athens. The apartments have expansive views to the on-slab resort-style pool, private study rooms, 24-hour fitness center, gaming room, and an underground parking garage. Landscape Architecture and Planning services included site capacity studies, site design studies, zoning approvals and construction documentation for the site and rooftop courtyard. *(Work performed by Dave with MKSK).*

OCU Master Plan, Circleville, OH

Masonry columns are used to reinforce the design of the new building and flank the vehicular entrance into the university. Additional masonry walls, columns, wrought iron fencing and signage branch off the main columns to engage the street and establish a presence along the heavily traveled Lancaster Pike Road. A large double row of shade trees complements the entry and initiates a strong visual edge to the University.

Innovation Drive Medical Office Campus, Dublin, OH

The buildings are centered on the property with parking on the outer edge of the site. The parking is evenly distributed between all three buildings. Lush landscaping and earth mounds provide a buffer between the parking lot and the public roads. The buildings are strategically arranged in a u-shaped pattern to provide an enclosed pedestrian courtyard that is separated from the parking lot and roads. This pedestrian space includes dense plantings, seating, walks and gathering spaces. The storm water basin located within the courtyard is planted with a prairie-like seed mix and ornamental grasses and provides an amenity to the space.
