

OCU MAIN ENTRY DESIGN

Ohio Christian University is located off of Lancaster Pike Road in Circleville, Ohio. G2 Planning and Design has been tasked with creating a main entry feature to the Ohio Christian University that establishes a strong sense of identity and highlights their proposed Ministry and Music Art Center.

Masonry columns are used to reinforce the architectural design of the new building and flank the vehicular entrance into the university. Additional masonry walls, columns, wrought iron fencing and signage branch off the main columns to engage the street and establish a presence along the heavily traveled Lancaster Pike Road. A large double row of shade trees complements the entry and initiates a strong visual edge to the University. The main vehicular drop off to the Ministry and Music Art Center is celebrated with pools, fountains and lush plantings.
